

AgencyOS - SaaS Project Blueprint

Project Overview

Build a modern SaaS platform called **AgencyOS**.

AgencyOS is an all-in-one operating system for freelancers, agencies, consultants, and small service businesses.

The goal is to replace spreadsheets, manual invoicing, Messenger conversations, and scattered tools with a single platform.

The application must be portfolio-worthy, production-ready, scalable, and demonstrate senior-level full-stack engineering skills.

Target Users

Primary Users

- Freelancers
- Web Agencies
- Marketing Agencies
- Content Agencies
- Video Editing Agencies
- Consultants
- Virtual Assistants

Secondary Users

- Repair Shops
 - Tutors
 - Coaches
 - Small Businesses
-

Core Value Proposition

Users should be able to:

- Manage clients
- Track leads

- Manage projects
- Generate invoices
- Schedule appointments
- Upload files
- Communicate with clients
- Generate AI-powered proposals
- Generate AI-powered contracts
- Track business analytics

All inside one dashboard.

Technical Requirements

Frontend

- Next.js 15
- TypeScript
- Tailwind CSS
- Shadcn UI
- React Query
- Zustand

Backend

- Next.js API Routes
- PostgreSQL
- Prisma ORM

Authentication

- Clerk OR
- NextAuth

Storage

- UploadThing OR
- AWS S3

Charts

- Recharts

Payments

- Stripe

AI Features

- Claude API
 - OpenAI API
-

SaaS Architecture

Multi-Tenant Architecture

Each company must have isolated data.

Example:

Agency A

- Clients
- Projects
- Invoices

Agency B

- Clients
- Projects
- Invoices

No company can access another company's data.

Roles

Super Admin

Can:

- View all organizations
 - View platform analytics
 - Manage subscriptions
-

Business Owner

Can:

- Manage company
 - Manage employees
 - Manage clients
 - Manage projects
 - View reports
-

Team Member

Can:

- View assigned projects
 - Update tasks
 - Communicate with clients
-

Client

Can:

- View project progress
 - View invoices
 - Download files
 - Send messages
-

Database Models

User

Fields:

- id
 - name
 - email
 - avatar
 - role
 - organizationId
 - createdAt
-

Organization

Fields:

- id
 - name
 - slug
 - logo
 - plan
 - createdAt
-

Client

Fields:

- id
 - organizationId
 - name
 - email
 - phone
 - company
 - notes
 - status
 - createdAt
-

Lead

Fields:

- id
- organizationId
- title
- source
- value
- stage
- createdAt

Stages:

- New
- Contacted
- Proposal Sent
- Negotiation
- Won

- Lost
-

Project

Fields:

- id
- organizationId
- clientId
- title
- description
- status
- progress
- deadline
- budget

Status:

- Planning
 - Active
 - Review
 - Completed
-

Task

Fields:

- id
 - projectId
 - assignedTo
 - title
 - status
 - dueDate
-

Invoice

Fields:

- id
- organizationId
- clientId
- amount
- status

- dueDate

Status:

- Draft
 - Sent
 - Paid
 - Overdue
-

Appointment

Fields:

- id
 - organizationId
 - clientId
 - startTime
 - endTime
 - notes
-

Message

Fields:

- id
 - senderId
 - receiverId
 - content
 - createdAt
-

File

Fields:

- id
 - organizationId
 - projectId
 - uploadedBy
 - fileUrl
 - fileName
-

Features

Dashboard

Display:

- Total Revenue
- Active Clients
- Open Projects
- Pending Invoices
- Upcoming Appointments

Include charts:

- Revenue Trend
 - New Clients
 - Conversion Rate
 - Project Completion Rate
-

CRM Module

Features:

- Add clients
 - Edit clients
 - Search clients
 - Filter clients
 - Notes
 - Activity timeline
-

Lead Pipeline

Kanban board.

Columns:

- New Lead
- Contacted
- Proposal Sent
- Negotiation
- Won
- Lost

Drag and drop support.

Project Management

Features:

- Create projects
 - Assign team members
 - Create tasks
 - Task statuses
 - Project timeline
 - Progress tracking
-

Invoicing

Features:

- Create invoice
 - Download PDF
 - Send invoice
 - Payment tracking
 - Invoice history
-

Appointment System

Features:

- Booking page
 - Availability management
 - Calendar view
 - Email reminders
-

File Sharing

Features:

- Upload files
- Client access

- Project-specific folders
 - Download history
-

Client Portal

Clients should have their own dashboard.

They can:

- View project progress
 - Download files
 - View invoices
 - Send messages
-

AI Features

Proposal Generator

Input:

- Client Name
- Service
- Budget
- Timeline

Output:

- Professional proposal
-

Contract Generator

Input:

- Service
- Budget
- Terms

Output:

- Ready-to-use contract draft
-

Follow-Up Generator

Input:

- Last client interaction

Output:

- Personalized follow-up message
-

Meeting Summary Generator

Input:

- Meeting notes

Output:

- Summary
 - Action items
 - Next steps
-

Subscription Plans

Free

- 5 clients
 - 2 projects
-

Pro

- Unlimited clients
 - Unlimited projects
 - AI features
-

Agency

- Team management
- Client portal
- Advanced analytics

Portfolio Goal

This project should demonstrate:

- SaaS Architecture
- Multi-Tenancy
- Authentication
- Authorization
- Database Design
- AI Integration
- Payment Processing
- File Storage
- Dashboard Analytics
- Real Business Workflows

The final product should look like a startup-ready SaaS that could realistically acquire paying customers.
